Installation Instructions
Read Carefully before Installing
Short Box and Long Box

Section A
Bracket installation.

1. For the front bracket measure in from the end of the crossmember 5 1/2" and drill a 9/32" hole. Bolt the top of the bracket to the crossmember with a 5/16" thread cutter bolt.
2. Bolt the small angle bracket to the vertical bracket with a 5/16" bolt and nut, drill a 9/32" hole through the rocker panel using the hole in the small angle as a guide. Bolt the small angle to the rocker panel with a 1/4" black carriage bolt and nut. See figure A.
3. Tighten all bolts.

Section B
Running board setup. *

1. * For diamond running boards see section E.
2. Install one square head bolt in each track on the bottom of the running board.
3. Bend stone guard to fit the wheel well, keeping the tape side up.
4. Install a stone guard on one end of the board using the 3/8" x 1" self-threading bolts. Thread the bolts through the holes and into the track, the bolts will cut their own threads in the track, do not over tighten these bolts. Install the 5 1/4" aluminum angle to the other end of the board with two square head bolts and nuts, mount the black plastic end cap to this angle with two 1/4" x 3/4" black bolts. For best appearance make sure end cap is flush with end of board.
5. Bolt the horizontal channels to the bottom of boards using the bolts already in the track and 1/4" nuts do not tighten at this time leave loose enough to slide the channel.
