

# Bug Shield

Stone and Bug Deflector

BF2  
DIP

## Quick and Easy Installation Instructions

### CONTENTS:

- |                     |                       |
|---------------------|-----------------------|
| (1) Bug Shield      | (1) instruction sheet |
| (4) mounting screws | (4) washers           |
| (4) Bump-ons        |                       |

**IMPORTANT:** Read all instructions carefully before beginning installation. The ideal installation temperature is between 65°-110°F (18°-43°C).

### STEP 1: PREPARATION

Clean the Bug Shield mounting location on the underside of the hood with a clean cloth. See **FIGURE 1**

### STEP 2: TRIAL FIT

Locate the center line/point of the Bug Shield. Then align the center line/point with the center of the hood and verify placement before proceeding. The Bug Shield should be offset approximately **1/2"** from the front edge of the hood. See Diagram **A or B**.

### STEP 3: INSTALLATION

Attach the Bug Shield to the underside of the hood by screwing the (4) self-tapping screws with rubber washers through the predrilled holes in the Bug Shield. A power screw driver is recommended, but once the screw penetrates the sheet metal, use a regular Phillips screwdriver the remainder of the way. **Do not overtighten screws. Be sure Bug Shield is properly positioned before using screws to prevent damaging hood.** See **FIGURE 2**

### STEP 4: AFTER INSTALLING

To reduce vibration, adhere the rubber Bump-ons at pre-cleaned locations on the painted hood/fender surface where the Bug shield may contact. If the hood does not shut properly it may be necessary to adjust the hood bumper stops (refer to your owner's manual).
