

Bed Protection Installation Instructions
Read Carefully before Installing
Short and long box

Section A

Bed protection installation.

1. Clean the bedrail surface completely of all dirt and debris before beginning installation.
2. Place (3) pieces of two sided tape on the bedrail as shown in illustration A.
3. Lightly position the bed protection on the bed rail. Once the bed protection is in the desired location, press down firmly on the taped areas to hold the bed protection in place.
4. The bed protection can be mounted by drilling (3) 9/32" holes thru the bed protection and the inside lip of the box, and mounting with 1/4" carriage bolts, washers and nuts. (See illustration B). Some models may have holes punched in the bed protection, if so use those holes as a guide to drill thru.
5. The bed protection can also be mounted by drilling (3) 9/32" holes down thru the top of the bed protection and the bedrail and fastening with 1/4" carriage bolts, washers, and nuts. (See illustration C.)
